

LC-7R

TUBES PREAMPLIFIER

LISTEN & CO.

*Modularity of the dimensions,
the sinuosity of the frontal,
enriched by large luminous vu meters,
the quality of the aluminum details,
make the LC-7R an appreciable object
because the sound quality
but also because charm of its exclusive design.*

THE SOUND

LISTEN & CO.

LC-7R is a tube preamplifier that uses ECC82 / 12AU7 and ECC83 / 12AX7 valves and also a Shuguang 5U4G tube rectifier. The three transformers are made of silicon steel sheets and high-strength OFC enamelled wire imported from Japan. For maximum precision in the variation of the listening volume a motorized ALPS potentiometer is used. A solid remote control is supplied. Excellent spatial rendering of the scene, detailed and profound.

A great preamplifier for ambitious listening.

LC-7R

LC-7R TUBE PREAMPLIFIER

Tube preamplifier

Inputs: 4 lines RCA (CD, TU, A1, A2)

Output connectors: 2 lines RCA (1 left + 1 right)

THD: < 0,2% @ 1kHz, 35V

Max output level: 35V

Gain: 17,6dB

Left and right crosstalk: ≥47dB

Input stage: 12AU7 (x2) and 12AX7 (x2) 5U4G (x1)

Frequency response: -2dB @ 10Hz / -2dB @ 50kHz

SNR: ≥92dB

Power consumption: ≤42W
